

Web Application Hosting

Web Application Hosting

What is a Web Application Hosting?

Web Application Hosting will let you move your intranet applications out of the office on the internet freeing up expensive hardware and support.

How would my company benefit from hosting with Random Digit?

With ever-increasing demands for businesses to have modern, functional and user friendly applications and the growing costs of employing in-house web server administrators, webmasters and Database DBA's, we at Random Digit believe we can offer a cost effective alternative to this expensive scenario.

Our team of motivated industry professionals, many from contracting backgrounds, are experienced and used to working on all types of server and software configurations from differing industry sectors. We have the expertise to cover all industry technologies currently in use and our commitment to ongoing training in the latest techniques and technologies helps keep us ahead of our game and provide you with a service that's second to none.

What expectations should we have?

Expectations are sometimes hard to define, but we believe they should be clear and simple at all times. Should you have any problem with your application call our dedicated 24/7 support team and they will diagnose the fault and where possible provide a fix.

Random Digit backup all hosted applications were required absolutely free to dedicated servers on a different continental shelf. This provides you will a fault tolerate service which can be recovered from within two hours should the worst ever happen. We can also provide staggered backups of data and files to provide a level of data rollback.

I'm sure you'll agree that's a service and response time you'll find hard to beat even with your own dedicated equipment and team. Please remember to call us if you have less demanding requirements as we can always tailor our agreements to suit your needs.

How does it work?

We place your application on a test server to determine the required resources, once we have agreed the level of equipment required and the frequency of any backups we can move your application to a live environment.

What will it cost us?

Due the complexity of individual businesses applications its not practical to detail prices, but for a simple example we charge £200 per month for a Shared server hosting no more than 5 other applications with Windows Server 2008 server running SQL Server 2008, IIS and SMTP.

How do I find out more?

Give us a call on 0800 0 148 504, or email our sales team at sales@randomdigit.net so we can arrange a convenient time to discuss your requirements.
